

Chemistry 1A: General Chemistry I

Term: Spring 2024

Instructor: Dr. Brophy

Class Schedule

Section 11 CRN 37910 Lab MW 8:30 am – 11:20 am in SC2202
Lecture MW 3:30 pm – 4:45 pm in MLC105

School Holidays

May 27 *Memorial Day*
June 19 *Juneteenth*

Section 12 CRN 32208 Lab MW 11:30 am – 2:20 pm in SC2202
Lecture MW 3:30 pm – 4:45 pm in MLC105

Sections 11 and 12 will meet simultaneously for the “double” lecture; however, you must attend the lab section that you are registered for. The lab and lecture components of the class cannot be taken separately under any circumstances.

Course Webpage

The course webpage is through De Anza Canvas. You will be automatically added to the Canvas shell as a student when you enroll in the course. Students on the waitlist do not have access to Canvas. This course webpage is designed to be viewed on a web browser rather than the student app. **Turn on Canvas notifications to receive class announcements, Inbox messages, and comments/feedback on assignment submissions.**

Community Statement

Every person in this class, regardless of personal history or identity categories, is a welcome and important member of this group. Your experiences are important, and you are encouraged to share them as they become relevant. No person in this group is ever expected or believed to speak for all members of any group(s).

You have the right to determine your own identity, to be called by whatever name you wish, and to be referred to by your pronouns. You have the right to adjust these things at any point. If you find any aspects of facilitation, instruction, subject matter, or program environment that result in barriers to your inclusion, please let me know right away, privately without fear of reprisal. We are all learning. It is my goal to continue learning and improving to support everyone in this class and, by extension, all my current and future students.

About Your Instructor

Instructor: Dr. Megan Brunjes Brophy

E-mail: brophymegan@fhda.edu

*Please note that **Canvas Inbox** is the most reliable ways to get in touch with me outside of class. I do not reply to messages on evenings and weekends. In general, you can expect a reply from me in 2–3 business days.*

Office: SC1220

Phone Number: 408-864-8338 (*not preferred*)

Office Hours Study hall time (aka office hours)

is an opportunity for you to come talk to your instructor outside of regular class time. Please bring your homework, notes, reading, or any other assignments. You are welcome to come talk to me about the course, questions that you have about the material or practice problems, and your educational path. Each of my office hours are open to all my students; please come say hi! Canvas office hours are my dedicated time to quickly respond to message through the Canvas inbox and I will reply as quickly as possible to messages received during this time period.

Day	Time	Location
Monday	2:20 pm – 3:10 pm	Canvas
	4:45 pm – 5:35 pm	SC1220
Wednesday	2:20 pm – 3:10 pm	Canvas
	4:45 pm – 5:35 pm	SC1220

My Teaching Philosophy

My hope is that every student who takes one of my classes gains an appreciation for the power of chemistry and the beauty of the natural world. It is important to me to design a course that is accessible to students of varying educational, cultural, and socioeconomic backgrounds while maintaining high intellectual and academic standards. I strive to reward consistent, sustained effort throughout the quarter, and my goal is for everyone who takes this class to pass with a C so that you can move on to the next stage of your educational or career pathway.

Official Course Description

This course provides an introduction to the structure and reactivity of matter at the molecular level, as well as an application of critical reasoning to modern chemical theory and structured numerical problem-solving. Students will learn the development of molecular structure from rudimentary quantum mechanics, including an introduction to ionic and covalent

bonding; chemical problem solving involving both formula and reaction stoichiometry employing the unit analysis method, and be introduced to thermochemistry and a discussion of the first law of thermodynamics.

What is this class about?

Chemistry 1A is the first quarter in the year-long college-level chemistry course. This sequence course is designed for students who plan to pursue a bachelor's degree in chemistry and other STEM-related fields. This class moves quickly through a brief review of foundational topics (significant figures, mathematical methods, chemical nomenclature) and into more advanced stoichiometry calculations and types of chemical reactions. We will examine the role of energy transfer in quantum models of the atom, and then build upon the Schrodinger model of the atom to molecular structure and covalent bonding models.

This is a fast-paced course that contains both lecture and lab components. In the lecture portion of the course, your growth and learning will be measured through daily problem sets as well as in-class practice problems. Your mastery of the material will be assessed through three midterm exams and one cumulative final exam. In the lab portion of the class, you will apply concepts learned in lecture and grow your practical skills through hands-on experimentation. Your understanding of the labs will be assessed through a series of quizzes.

Enrollment Requirements

Recommended Preparation

I generally assume that students enrolled in Chemistry 1A have taken Chemistry 25 (or equivalent) in-person at De Anza College within the previous year. Chemistry 1A requires strong math and study skills. Because of this, it is particularly important for students to proactively review prior material and reach out early and often for help. The college provides multiple spaces and services for academic support, including the MSTRC, the PSME Village, and the MESA center.

Prerequisites

Chemistry 25 or Chemistry 30AA or a satisfactory score on the Chemistry Placement Test; and intermediate algebra or equivalent (or higher), or appropriate placement beyond intermediate algebra.

Advisory

EWRT 1A or EWRT 1AH or ESL 5

Late Adds and Add Codes / Drops

I will only give out add codes if space is available by the second lab session. If you are interested in joining the class, *you must attend lab and lecture during the first week*. Students who miss the first lab session will not be permitted to enroll in the course under any circumstances. Similarly, if you are enrolled in the course and miss the safety lab, you will be dropped from the course during the lab period. ***I do not give out add codes after the first week of class***, and I strongly encourage you to enroll in an open section if you are on the waitlist.

Students who miss two labs during the first two weeks of class will be dropped from the course.

Course Objectives and Learning Objectives

Course Objectives

- Examine contributions by investigators of diverse cultures and times to the body of chemical knowledge, with an emphasis on physical and chemical conceptual frameworks.
- Investigate the critical aspects of measurement.
- Explore the historical development of understanding the structure of the atom.
- Assess the development of the Periodic Table of Elements in light of modern atomic theory.
- Differentiate the causes and types of molecular bonding.
- Appraise the effect of quantum mechanics on formulation of molecular structure.
- Employ systematic nomenclature to the identification of molecules.
- Utilize the principles of stoichiometry to analyze compounds, chemical mixtures, and reactions.
- Examine the prominent characteristics of solutions.
- Classify the major types of chemical reactions.
- Apply the essential principles of thermodynamics to chemical systems.

Learning Objectives

- Identify and explain trends in the periodic table.
- Construct balanced reaction equations and illustrate principles of stoichiometry.
- Apply the first law of thermodynamics to chemical reactions.

Dr. Brophy's Summary of Learning Objectives

In Chemistry 1A, we seek to understand the history of the field of modern chemistry. We will apply quantitative calculations to improve our conceptual understanding of the nature of the world around us. We will also explore the role of electrostatic potential energy in molecular structure and chemical reactivity.

Important Dates

College Dates

First Day April 8, 2024 First day of class! In-person attendance is expected.

Withdraw May 31, 2024 Last day to *withdraw* from the course.

For a full list of important dates, please see <https://www.deanza.edu/calendar/>

If circumstances beyond your control prevent you from completing the course, you may qualify for an excused withdrawal.

Please see the following website for more information. <https://www.deanza.edu/admissions/withdrawals.html>

Supplies and Materials: Lecture

- **Computer and printer access** You will require internet access and a printer throughout this course. The Library West Computer Lab is located on the lower level of Learning Center West in LCW 102. Printing can be found around campus: <https://www.deanza.edu/students/printing.html>
- **Textbook** *OpenStax Chemistry*, 2nd edition. Available **free** online at <https://cnx.org/contents/f8zJz5tx@9.18:DY-noYmh@9/Introduction> or on the OpenStax app (iPhone/iPad). You may also purchase a printed copy from Amazon for ca. \$55 new.
- **Calculator** A scientific calculator with base-10- and natural-log functionality is necessary and sufficient for this class. If you have already purchased a graphing calculator for another class, you may use it on exams and quizzes; however, *we will not use the graphing functionality*. Recommended models:
<https://www.amazon.com/Texas-Instruments-MultiView-Scientific-Calculator/dp/B000PDFQ6K>
https://www.amazon.com/dp/B005QXO8J0/ref=dp_cerb_3
- **Molecular Modeling Kit** We will use a molecular modeling kit in class when we study molecular structure. I recommend one of the following options:
 - Duluth Labs modeling kit
 - Old Nobby modeling kit
- Stapler and staples. Most of the classrooms do not have a stapler. Please bring one with you to class.

Supplies and Materials: Lab

- **Personal Protective Equipment** PPE is required for each wet-lab day and is essential to keep you and your colleagues safe and healthy. *You may not participate in lab without PPE.*
 - Approved laboratory safety goggles (not safety glasses), available from the De Anza College Bookstore. Safety goggles must carry a ANSI Z87.1 shatter rating. If you purchase safety goggles from another retailer you must present the packaging with verification of ANSI rating to your instructor.
 - Disposable latex or nitrile gloves.
 - Long pants/skirt and closed-toe shoes must be worn in lab.
 - A lab coat or lab apron is optional and recommended.
- **Lab Manual** Lab procedures and assignments for Chemistry 1A will be posted on Canvas. You must print the lab manual and bring it with you to lab. *Electronic devices may **not** be out and in use during lab experiments.* I recommend that you have a dedicated folder or binder to keep lab manuals in.
- **Lab Notebook** A dedicated bound composition notebook to use as a laboratory notebook. Notebooks with metal spiral binding or perforated pages are *not* permitted. *You do not require a lab notebook with carbon copies.* You may reuse or continue a lab notebook from a previous course.
- **Pen** You must bring a non-erasable pen with blue or black ink with you to lab.

Recommended Materials

- *Calculations in Chemistry an Introduction*, 2nd edition by Dahm and Nelson. This **optional, recommended** resource provides additional examples of common problem-solving techniques. I strongly recommend this workbook if you would like extra practice on calculations.
- *Chemistry: The Molecular Nature of Matter and Change*, any edition by Silberberg and Amateis, available at the De Anza College Bookstore or from multiple online retailers. The MSTRC also has copies of this book available to use.

Campus Resources

- **Math, Sciences, and Technology Resource Center (MSTRC) Tutoring.** The MSTRC offers tutoring for the Chemistry 1 sequence and is located in room S43 in the S-squad. I strongly recommend that you study in the MSTRC early and often. They have computers and it is a great place to study for your STEM classes. <https://www.deanza.edu/studentsuccess/mstrc/>
- **Disability Support Programs Services** The mission of DSPS is to ensure access to the college's curriculum, facilities, and programs. In particular, DSPS can help you get extended time on examinations. Please reach out to them directly if you have questions. <https://www.deanza.edu/dsps/>
- **De Anza College Library** The library houses the Library West Computer Lab and group study rooms that may be reserved online. <https://www.deanza.edu/library/index.html>
- **Resources for Students** Additional resources may be found at <https://www.deanza.edu/services/> . If you need additional resources, I can put you in touch with support services through De Anza Connect. Please give me explicit permission to share your information with them.
- **Student Help Hours** Instructor office hours are the best time to ask questions related to course content in-person. This time is *for you, the student*. Please come!

I expect you to use the resources available to you, share high-quality resources with your classmates, and ask for help when needed.

Syllabus Statement

This course syllabus is a living document. Please read it carefully and completely in its entirety before asking me any questions regarding the course schedule, content, requirements, grading, etc. You are expected to adhere to the De Anza College Student Code of Conduct Administrative Policy 5510 at all times. All corrections and changes to this syllabus will be announced through Canvas.

This class is divided into two separate instructional periods: a lecture period devoted to the primary course material and a lab period for conducting lab experiments. Everyone will have the same lecture period, but a different lab period depending on which section you are enrolled in. At De Anza College, the lab and lecture may not be taken as separate courses under any circumstances.

Time Commitment

This is a five-unit course. Three hours lecture and six hours laboratory will be spent in class. You should expect to spend an additional **20 hours a week** studying and working on class assignments to excel in this class.

Attendance Policy

Your punctual attendance is expected at all lecture and laboratory sections of the course. *Plan to arrive 5-10 minutes early.* If you will have to miss lecture or lab for any reason, let me know through Canvas or by email as soon as possible. Notifying your instructor of absences or tardiness shows that you take your responsibility towards your fellow students seriously. If you miss either lab or lecture, please arrange a time to meet with a fellow student so that you can get notes and find out what you missed. (*Note: Punctuality is very important to me, personally. I understand that things happen, and traffic can be unpredictable; however, your habit should be to arrive at class on time. I do notice if you are routinely late.*) You do not need to tell me why you are missing class. I think that is your personal, private business.

The De Anza College Chemistry Department does not offer make-up labs under any circumstances. ***If you miss 3 lab periods you will fail the course.*** This is non-negotiable. You should consider if this is the best quarter for you to commit to this class.

Grading Policies

To succeed in this course, you will need to exhibit **consistent and sustained effort** throughout the quarter. This will be demonstrated through in-class participation, laboratory preparation and data analysis, and assessments. Assignment types are assigned a weight; not all points are created equally!

Lecture	70% of total grade
Lecture homework	10%
Exams	60%
Lab	30% of total grade
Lab Tickets	3%
Lab Assignments	15%

Final %	Grade ^{1,2}
>100.00	A+
≥ 90.00	A
88.00 – 89.99	A–
85.00 – 88.99	B+
80.00 – 84.99	B
78.00 – 79.99	B–

Clean-Up	2%	75.00 – 77.99	C+
Lab Quizzes	10%	68.00 – 74.99	C
		63.00 – 67.99	D+
		55.00 – 62.99	D
		< 55.00%	F

¹A+ grades will be given to students who demonstrate excellence in the following three areas: lecture, lab *and* class participation. A+ grades will be granted only at Dr. Brophy's discretion for extraordinary effort and work.

²Please note that I do not typically round grades or adjust the grade scale for passing grades. It is important to me to keep a consistent and fair grading scale. Do not ask me to artificially raise your grade at the end of the quarter.

Note that grades will be entered in Canvas; however, the gradebook and assignment types may not be finalized until the end of the quarter. I make an effort to make sure that the grade that you see in Canvas is close to "real-time"; however, there are some quirks of the platform that may create delays. If it looks like I haven't released grade for an assignment or it has been more than one week since something was due, feel free to remind me about the assignment. *Note that it may take me longer than a week to grade late assignments.* I also encourage you to make your own spreadsheet to keep track of your letter grade throughout the quarter.

Canvas Gradebook Settings

With a few exceptions, all student assignments will be submitted on Canvas. Late work will be accepted until June 20th at 11:59 pm– this is a hard deadline and will not be extended under any circumstances. The Canvas gradebook is set up such that any work submitted late will receive a 5% deduction per day or fraction thereof. The lowest grade you can get on an assignment that you complete and turn in is 50%. Each Canvas assignment allows **one** submission. Pay careful attention to the assignment to make sure that you upload the correct file! If you make a mistake, you may upload the correct file as a submission comment *immediately*. Once you submit an assignment and it is graded, your score is **final**, even if submitted before the deadline. I will only regrade assignments in cases of obvious errors (e.g. I missed a page and marked something incomplete). Altogether, be intentional and careful when you upload assignments. The work that you submit should represent your best effort. Any missing submissions will automatically receive a zero, and any work submitted late may show a score of zero until it has been graded.

While this class moves quickly and it is important to maintain consistent effort throughout the quarter, I recognize that personal and professional events can present challenges. I generally believe that everyone should be able to miss ~1 week of class without it having a negative impact on your grade. In order to apply this standard fairly and consistently, some of your lowest assignment scores will be automatically dropped from your final grade calculation.

Lecture Homework	Lowest 3 scores will be dropped from your final grade.
Exams	Lowest 1 score will be dropped from your final grade.
Pre-labs	Lowest 1 score will be dropped from your final grade.
Lab assignments	Lowest 2 scores will be dropped from your final grade.
Clean-up	No scores will be dropped.
Lab Quizzes	Lowest 1 score will be dropped from your final grade.

Tips for Learning Chemistry

Like many introductory survey courses in STEM fields, chemistry has a reputation for being a hard subject. I expect you to find this class challenging; however, putting the time and energy in to learning the material can be extremely rewarding. This class will utilize many resources in concert to help you gain skills, knowledge, and understanding for you to apply chemical principles to multiple areas of study. The lectures will provide organization and context for the topics that we cover, and you should use the assigned reading and homework to fill in the details.

1. Know where to find relevant information for the course, in particular the assigned reading for both the labs and the lectures.

-
2. Complete the assigned reading before coming to class. Review topics that are unfamiliar. Write down any vocabulary words that you do not understand as well as their definitions *from the textbook*.
 3. Practice and develop your critical reading skills.
 4. Take *handwritten* notes during class and review your notes regularly. Cognitive science tells us that we learn new information better when we write rather than type.
 5. Review your notes early and often. Use the assigned reading to fill in details and redraw important figures.
 6. Write down any questions you have. Bring these questions with you to office hours or the drop-in tutoring center.
 7. Most of the “rules” that you learn in chemistry are guidelines. There are exceptions. You will recognize these exceptions more as your chemical intuition builds.
 8. Do a little bit every day. After every lecture, review the reading assignment and complete in-chapter and end-of-chapter exercises. Spend at least an hour on chemistry every day.
 9. Seek conceptual understanding. Memorization will follow.
 10. Join a study group. Work on problem sets together. The best way to learn the material is to teach it to somebody else.
 11. Utilize the free tutoring services on campus and online through the MSTRC.
 12. Turn in and finish assignments as soon as you are able. Don’t assume that you’ll have time to do it later, or immediately before the deadline. Life is unpredictable.
 13. Take care of yourself! Stay well-rested and drink water. Your physical health and safety are your priority. If you need assistance with any basic needs, please reach out to me to referrals to campus resources.
 14. Technology will betray you at the worst possible moment, and there is no reliable support for Canvas or other online systems in the evening or on weekends. Start your assignments when they are available and upload them well before the official deadline.
 15. Think of chemistry like a story—each topic interconnects and you will continue to build on the concepts that you are learning earlier in the course.
 16. Maintain a growth mindset! Even if something is hard today, that doesn’t mean that it will always be hard.

Take a look at the following outside resources:

Academic Integrity

The process of learning requires physical changes to occur in your brain. Cognitive research demonstrates that consistent practice and learning to recognize mistakes are key aspects of the learning process. As such, all students should be aware of the De Anza College policy on academic integrity outlined at https://www.deanza.edu/policies/academic_integrity.html. The following text is reproduced from the De Anza College manual:

...the college is committed to providing academic standards that are fair and equitable to all students in an atmosphere that fosters integrity on the part of student, staff and faculty alike. The student's responsibility is to perform to the best of his or her potential in all academic endeavors. This responsibility also includes abiding by the rules and regulations set forth by individual faculty members related to preparation and completion of assignments and examinations.

I expect that all work submitted for this class will represent your own understanding of the material and must be written in your own words. Cheating, copying, plagiarizing, etc. will not be tolerated. Due to the “online” nature of the class, students must take extra care to abide by the policies and expectations set forth for each assignment. While it is tempting to use the full weight of the internet, some sources may provide misleading or corrupt information. Students should focus on the required reading and recommended resources for the class, and any other sources must be vetted by the instructor. Tutoring resources are allowed for homework assignments; however, using a paid, static resource is forbidden. This can be particularly challenging as some websites that profess to provide tutoring services are destructive to the learning process. A good rule-of-thumb is that any tutoring service will help you solve a problem and arise at an answer *on your own*—this means that your brain is making new physical connections between neurons, and you are learning! If an online source professes to offer tutoring, but instead provides you with answers, this is cheating. The websites Chegg, CourseHero, Reddit, as well as any similar site are explicitly forbidden for all class assignments. Posting class assignments on these websites is considered intent to cheat and a violation of the academic integrity policy. I am happy to discuss appropriate resources with you, and I encourage you to ask for permission rather than forgiveness.

You may collaborate with your classmates on lecture homework assignments; however, the final work that you submit must reflect your own understanding of the material. Do not allow any other student to copy your work under any circumstance. If a student asks if they can copy your work or “just see it as an example”, ask them to reach out to the instructor for help. If two students turn in the same work, both students will have participated in academic dishonesty.

Class assessments are used to measure an individual student’s mastery of the material. They are all closed resource, and you will be provided with any physical constants or additional information as necessary. A common mistake that past students have made is to Google a question and copy an answer from the internet—this behavior is forbidden, and the consequences are described below. If I suspect cheating on a quiz, you will be required to meet with me face-to-face.

Any incident of cheating or plagiarism, no matter how minor, will be reported to the Dean of Student Development and the Dean of the Physical Sciences, Mathematics, and Engineering division. Administrative consequences are summarized in the college manual. Additional consequences will be applied to your course grade. **The first incident of academic dishonesty will result in zero points on the assignment, a potential grade penalty of up to 8% to be deducted from your final grade, and loss of any extra credit points for the quarter.** Any subsequent instances of academic dishonesty *no matter how minor* will result in failing the class. In short, academic dishonesty will have a negative impact on your grade and may result in disciplinary probation or expulsion. If academic dishonesty is discovered within two-years of your completion of the course, your official grade will be changed.

I recognize that these consequences may sound scary. Unfortunately, I have had students who did not pass this class as a direct result of academic dishonesty. I *am* committed to supporting you and your learning process, and I expect you to display high ethical standards. If you are not sure if a resource is allowed, or if something feels “off” to you, alert your instructor right away. I do reserve the right to make major changes to the class structure—including requiring an oral exam / exit interview—if there are class-wide violations of the academic integrity policy.

Lecture

Your attendance and active participation are expected at every lecture period. If you know that you will not be able to attend lecture for any reason, let me know by email right away (even if only 5 minutes before class or 5 minutes after the start of class). **You are responsible for communicating with a classmate to get notes and missed information.** Late arrivals and early departures are distracting for the whole class (and me!), so arrive on time and stay for the whole class period. I

strongly encourage taking your own notes in lecture. We will sometimes use computers or other electronic devices; however, do not use your computers for non-course related activities during lecture. Put your phone on silent or Do Not Disturb while you are in class. If you must take a phone call in case of emergency, quietly leave the room before answering the phone.

Problem Sets (3 points each)

Consistent practice is an essential component of learning, and exam questions will often be like the assigned homework problems and/or recommended practice problems. Homework problems from the textbook will be posted for each lecture, submitted on Canvas, and graded based on completion. Homework will be due each Tuesday and Sunday. While the precise number of questions will vary for each assignment, in general Tuesday homework will be ~5-7 questions and Sunday homework will be 10-15 questions. These homework problems represent the minimum amount of practice you should do. Additional practice problems may be found at the end of each textbook chapter. I expect you to make an honest effort and turn in homework in a timely manner. In general, the answers to these questions may be found in the back of the textbook and solutions are readily available online. It is your responsibility to keep up with suggested practice problems *every day*. You should expect to spend 2-3 hours on each problem set. *Productive collaboration with classmates is expected and encouraged; however, any work that you submit must represent your own understanding and contributions.*

Exams (100 points each)

There will be a total of three midterms and one cumulative final exam this quarter; however, only your top three scores will be used to calculate your final grade. The midterms will cover material related to the assigned reading and course objectives. The final exam will be a comprehensive, cumulative final exam.

Early and late exams will not be administered, and **missing an exam will result in a zero**. You should arrive to class on time for the exams. I do **not** guarantee that you will be able to take the exam if you arrive late. I am unable to accommodate make-up exams under any circumstances. If you require any accommodations for exams, you must be approved by DSPS. For extended-time or reduced-distraction exams, please schedule your exam in the DSPS office to start with the rest of the class.

Exams will consist of both multiple-choice questions and short answer questions with the opportunity for partial credit. You must show your work to receive credit for any answer. Detailing any mathematical steps in a clear fashion will communicate your understanding of the material. *I am more interested in how you think about a problem than your final answer.* You will be asked to demonstrate your conceptual understanding of the material and apply those concepts in an algebraic context and solve quantitative problems.

You should bring a scientific or graphing calculator with you to each exam. **Phones, smart watches, and other computers are not permitted in any circumstances.** If I see you on your phone or other electronic device (besides a regular calculator), you will receive a zero on the exam and I will file an academic dishonesty report.

The first three exams will be administered during the scheduled lecture time. The final exam will be administered during the designated final exam time on **Monday, June 24th from 4 – 6 pm in MLC105**. This date and time are determined by De Anza College and cannot be moved under any circumstances. If you cannot take the exam at this time, you will receive a zero. You may verify the designated final exam on the De Anza College website, and please notify me immediately on any errors on this syllabus.

Lecture Schedule and Assigned Readings

Chemistry 1C will cover material presented in chapters 1–8 of OpenStax Chemistry.

Detailed reading related to each lecture will be announced on Canvas. In the schedule below, chapter reading is given for the required OpenStax OER textbook. Additional, required reading will be posted on Canvas.

I will make every effort to keep to the lecture schedule below; however, exam dates may change due to unforeseen circumstances. Any changes to exam dates or content will be announced in Canvas.

Week	Date	Day	Lecture Topic <i>Readings from OpenStax. See Canvas for additional recommended reading.</i>
1	4/8	M	Lecture 1: Tools of the trade <ul style="list-style-type: none"> •significant figures •precision, accuracy •the scientific method <i>OpenStax Chapter 1 (all)</i>
	4/10	W	Lecture 2: The nuclear atomic model <ul style="list-style-type: none"> •Subatomic particles and electrostatic forces, reading the periodic table •Isotopes, ions •Electron energy levels <i>OpenStax Chapter 2 sections 1 – 5</i>
2	4/15	M	Lecture 3: Molecules, Compounds, and Mixtures <ul style="list-style-type: none"> •Ionic and covalent compounds •Empirical formula determination •Molecular formula determination <i>OpenStax Chapter 2 sections 6 and 7</i> <i>OpenStax Chapter 3 sections 1 and 2</i>
	4/17	W	Lecture 4: Chemical Reaction Stoichiometry <ul style="list-style-type: none"> •Balancing chemical equations •Reaction stoichiometry •Limiting reagents <i>OpenStax Chapter 4 sections 1, 3–5</i>
3	4/22	M	Lecture 5: Solutions and solubility <ul style="list-style-type: none"> •Solubility rules •Precipitation reactions •Molecular, total ionic, and net ionic equations •Stoichiometry with solution-phase reactions <i>OpenStax Chapter 3 sections 3 and 4</i>
	4/24	W	Lecture 6: Chemical reaction types <ul style="list-style-type: none"> •Acid-base reactions •Reduction-oxidation reactions •Assigning oxidation numbers <i>OpenStax Chapter 4 section 2</i>
4	4/29	M	Unit 1 Midterm: Lectures 1–6
	5/1	W	Lecture 7: The wave nature of light and atomic spectra <ul style="list-style-type: none"> •Electromagnetic waves •Blackbody radiation and the photoelectric effect •Atomic line spectra •The Bohr model of the atom <i>OpenStax Chapter 5 section 1</i> <i>OpenStax Chapter 6 sections 1 and 2</i>
5	5/6	M	Lecture 8: Wave-particle duality and the Schrodinger model of the atom <ul style="list-style-type: none"> •The de Broglie wavelength •The electron-wave model •Electron orbitals as solutions to the Schrodinger equation <i>OpenStax Chapter 6 sections 3</i>
	5/8	W	Lecture 9: Many-electron atoms and electron configurations <ul style="list-style-type: none"> •Shielding and effective nuclear charge •Electron configurations

			<i>OpenStax Chapter 6 section 4</i>
6	5/13	M	Lecture 10: Periodic trends <ul style="list-style-type: none"> •Atomic radii: covalent and ionic •Ionization energy •Electron affinity <i>OpenStax Chapter 6 section 5</i>
	5/15	W	Lecture 11: Bond Types and Bond Energies <ul style="list-style-type: none"> •Ionic bonding, covalent bonding, and metallic bonding •Strengths of ionic and covalent bonds •Reaction enthalpies from bond energies <i>OpenStax Chapter 7 sections 1, 2, and 5</i> <ul style="list-style-type: none"> •Calorimetry introduction <i>OpenStax Chapter 5 section 2</i>
7	5/20	M	Lecture 12: Thermochemistry <ul style="list-style-type: none"> •Reaction enthalpy •Hess's Law •The Born-Haber Cycle <i>OpenStax Chapter 5 section 2 and 3</i>
	5/22	W	Unit 2 Midterm: Lectures 7–11
8	5/27	M	Memorial Day Holiday – college closed
	5/29	W	Lecture 13: Lewis Dot Structures I <ul style="list-style-type: none"> •Lewis Dot Symbols •The octet "rule" •Building simple Lewis Dot Structures <i>OpenStax Chapter 7 section 3</i>
9	6/3	M	Lecture 14: Lewis Dot Structures II <ul style="list-style-type: none"> •Two central atoms •Resonance •Formal charge <i>OpenStax Chapter 7 section 4</i>
	6/5	W	Lecture 15: VSEPR and Molecular Polarity <ul style="list-style-type: none"> •Types of electron groups •Molecular shape •Bond vectors and molecular polarity •Case study: ozone <i>OpenStax Chapter 7 section 6</i>
10	6/10	M	Lecture 16: Valence Bond Theory <ul style="list-style-type: none"> •Linear combinations of atomic orbitals •Hybrid orbitals •σ- and π-bonds •Bonding in allene <i>OpenStax Chapter 8 sections 1 – 3</i>
	6/12	W	Lecture 17: Molecular Orbital Theory <ul style="list-style-type: none"> •Molecular orbital diagrams, bonding orbitals, and antibonding orbitals •Determine bond order •Non-bonding orbitals •Paramagnetism of O₂ <i>OpenStax Chapter 8 section 4</i>
11	6/17	M	Unit 3 Midterm: Lectures 12–17 3:30 pm – 4:45 pm in MLC105
	6/19	W	Juneteenth Holiday – college closed
12	6/24	M	Cumulative Final Exam 4 pm – 6 pm in MLC105

Final grades will be available through MyPortal by the second Sunday after finals week. For more information, please see <https://www.deanza.edu/apply-and-register/register/grades.html>. If there is a problem with your final grade, please come see me at the beginning of the following quarter.

Lab

Chemistry is an experimental science, and the laboratory is a major component of the course. De Anza College does not offer make-up labs, and **you must attend the laboratory section that you are registered for** to complete the required labs. Everyone gets one excused absence with no grade penalty. A second absence, regardless of the circumstances of your first absence, will result in a zero for the lab and all associated assignments. After a third lab absence, you will automatically receive an "F" in the course.

Your timely attendance is expected at every lab. The beginning of each lab period is reserved for lab lecture. The lab lecture is a required component of the laboratory section and will include essential safety information. **If you miss lab lecture, you will not be permitted to complete that lab and you will receive a zero for all related assignments.**

You must clean up your work area before leaving each lab. Failure to do so will result in a loss of points for that lab. Before you leave lab, **check-out with me**. You will not receive credit for the lab unless I have signed your data in your lab notebook.

Lab assignments will consist of pre-labs, completion of laboratory experiments and mindful data collection, and analysis of data.

Lab Tickets (3% of total grade)

Lab tickets, or pre-lab assignments, will vary by lab; however, they will generally include assigned reading, safety preparation, and an introduction to the lab experiment. **All lab procedures for this quarter are posted on Canvas. Do not refer to the lab manuals on the department webpage.** I expect you to come to lab prepared to complete each experiment with minimal delays. Pre-lab assignments will be checked by your instructor at the beginning of your lab.

Pre-labs will generally be graded out of 3 points. As a rough rubric, scoring 3/3 points on a pre-lab means that you have completed the lab to a high standard (e.g. detailed and unambiguous schematic of the procedure, answer all questions in full sentences, reagents/supplies/and amounts are listed); 2/3 indicates the pre-lab is good but there is room for improvement; 1/3 indicates that the pre-lab is incomplete or lacks detail.

Laboratory Assignments (15% of total grade)

Lab assignments will make up a total of 15% of your grade in the class. This assignment category will include lab participation, data collection and recording, analysis, and assessments. Please continue reading for details on the types of assignments that will be included. *You must be present in lab in order to receive full credit.*

ACS Laboratory Safety Course

The ACS Laboratory Safety Course must be completed by the third lab meeting and before you will be allowed to perform any lab experiments. *You will be dismissed from lab and receive a zero for the day if you have not completed the lab safety course.*

Lab Participation and Completion

You will receive credit for coming to lab and completing the experiment with your lab group, and you will upload a verified copy of your data to Canvas to receive credit. **Data collected during the lab period must be recorded directly in your laboratory notebook in pen.** You will not receive credit for any data written on a worksheet or separate piece of paper. Before you leave lab for the day, have me check off on your data in your lab notebook for the available points.

The entire class is responsible for the lab housekeeping. If the lab or balance room are left messy, or the equipment is not correctly stored, the entire class will lose points.

Arrive on time	1 point
Complete the lab safely	1 point
Record data in your lab notebook	1 point
Clean up your station and equipment before the end of class	2 points
total	5 points

Clean-Up (2% of total grade)

Each student is required to sign up for one lab period in which they will be responsible for after-lab clean-up. This involves staying to end of lab, making sure the common lab areas and balance area is clean, the waste bottles are closed, etc. In addition, each student is responsible for cleaning their own materials and work area. Your designated clean-up day is worth 1% of your grade.

The other 1% of the grade will be class points. Students should start cleaning up their own areas *30 minutes prior to the end of lab* and should have Dr. Brophy check their lab notebooks no later than 20 minutes prior to the end of lab. The last 10 minutes of lab are reserved for the instructor to do a final inspection of the lab and waste areas. In addition to general cleanliness, the class can earn points in this category by following safety rules (e.g. water bottles outside, keep electronic devices away).

Laboratory Quizzes (10% of total grade)

There will be 6 lab quizzes this quarter that will cover the following topics:

- Quiz 1: Measurements lab and density (10 points, 15 minutes)
- Quiz 2: Chemical nomenclature (10 points, 15 minutes)
- Quiz 3: Gravimetric analysis and empirical formulae (20 points, 30 minutes)
- Quiz 4: Precipitation and limiting reagents (20 points, 30 minutes)
- Quiz 5: Acid-base titrations (20 points, 30 minutes)
- Quiz 6: Redox titrations (20 points, 30 minutes)

All lab quizzes will be administered at the *beginning* of your lab class. You must arrive on time in order to be able to use the full time available. All lab quizzes will be **closed** notes—you may not use your lab notebook or any other additional resources.

Laboratory Safety

All chemistry laboratories inherently come with associated risks and hazards. It is inevitable that some accidents will occur during your chemistry course work. When an accident occurs, **inform your instructor immediately** and **do not attempt to clean-up any broken glassware or spilled chemicals by yourself**. In order to ensure that the lab is as safe as possible, we must (1) **Recognize hazards**, (2) **Assess the risks of hazards**, (3) **Minimize the risks of hazards**, and (4) **Prepare for emergencies**.

You have the right to advocate for yourself. If you feel a particular procedure or chemical is unsafe, or a specific accommodation will enhance your lab experience, I welcome your feedback. I may not have an answer or solution for you right away, but I will work on your behalf to make sure that you can complete the labs safely.

From the American Chemical Society Safety In Academic Laboratories Guidelines, 7th Ed., the following mandatory minimum safety requirements must be followed by all students and be rigorously enforced by all chemistry faculty:

- 1) **Chemistry Department-approved safety goggles purchased from the De Anza College bookstore (NOT safety glasses) must be worn at all times once laboratory work begins, including when obtaining equipment from the stockroom or removing equipment from student drawers**, and may not be removed until all laboratory work has ended and all glassware has been returned to student drawers.
- 2) **Shoes that completely enclose the foot** are to be worn at all times; NO sandals, open-toed, or open-topped shoes, or slippers, even with socks on, are to be worn in the lab.
- 3) Shorts, cut-offs, skirts or pants exposing skin above the ankle, and sleeveless tops may not be worn in the lab: **ankle-length clothing must be worn at all times**.
- 4) Hair reaching the top of the shoulders must be tied back securely.
- 5) Loose clothing must be constrained.
- 6) Wearing "...jewelry such as rings, bracelets, and wristwatches in the laboratory..." should be discouraged to prevent "...chemical seepage in between the jewelry and skin...".
- 7) **Eating, drinking, or applying cosmetics in the laboratory is forbidden at ALL times, including during lab lecture. Food and drink containers are not allowed in lab at any time. If I see them, I will put them outside.**
- 8) Use of electronic devices requiring headphones in the laboratory is prohibited at ALL times, including during lab lecture.
- 9) Students are advised to inform their instructor about any pre-existing medical conditions, such as pregnancy, epilepsy, or diabetes, that they have that might affect their performance.
- 10) Students are required to know the locations of the eyewash stations, emergency shower, and all exits.
- 11) Students may not be in the lab without an instructor being present.
- 12) Students not enrolled in the laboratory class may not be in the lab at any time after the first lab period of each quarter.
- 13) Except for soapy or clear rinse water from washing glassware, **NO CHEMICALS MAY BE Poured INTO THE SINKS**; all remaining chemicals from an experiment must be poured into the waste bottle provided.
- 14) Students are required to follow the De Anza College Code of Conduct at all times while in lab: "horseplay", yelling, offensive language, or any behavior that could startle or frighten another student is not allowed during lab.
- 15) Strongly recommended: Wear Nitrile gloves while performing lab work; wear a chemically resistant lab coat or lab apron; wear shoes made of leather or polymeric leather substitute.

Reckless behavior will not be tolerated. If your actions endanger the health and safety of yourself or another person, you will be asked to leave and you will receive a zero for the lab and related assignments. In extreme cases, you may lose your lab privileges for the remainder of the quarter and/or fail the course.

Lab Schedule

The expected laboratory schedule for Winter 2024 is given below.

Week	Monday	Wednesday
1	Check-In Safety Contract is due in-class <i>Complete ACS Safety Course at Home</i>	Measurements Lab
2	<i>Quiz: Measurements and Significant Figures</i> Nomenclature Worksheet	<i>Quiz: Chemical Nomenclature</i> Hydrate Lab Day 1
3	Hydrate Lab Day 2	Types of Chemical Reactions Lab Day 1
4	Types of Chemical Reactions Lab Day 2 (Lecture midterm 1)	<i>Quiz: Hydrate Lab and Gravimetric Analysis</i> Precipitation Lab Day 1
5	Precipitation Lab Day 2	Precipitation Lab Day 3
6	<i>Quiz: Precipitation Lab</i> Conductivity Lab Day 1	Acid-base Titration Day 1
7	Acid-Base Titration Day 2	Calorimetry Day 1 (Lecture midterm 2)
8	<i>No Class for Memorial Day</i>	<i>Quiz: Acid-base Titration</i> Calorimetry Day 2
9	Redox Titration Day 1	Redox Titration Day 2
10	Line Spectra Worksheet	<i>Quiz: Redox Titration</i> Molecular Modeling Worksheet
11	Check Out (Lecture midterm 3)	<i>No Class for Juneteenth Holiday</i>
12	Finals week no lab Lecture Final 4 – 6 pm in MLC 105	Finals week no lab

Student Learning Outcome(s):

- Identify and explain trends in the periodic table.
- Construct balanced reaction equations and illustrate principles of stoichiometry.
- Apply the first law of thermodynamics to chemical reactions.

Office Hours:

M,W	02:20 PM	03:20 PM	Canvas	
M,W	04:45 PM	05:25 PM	In-Person	SC1220
