- i. Explore sequences and series.
- j. Investigate how mathematics has developed as a human activity around the world.

Student Learning Outcomes: The student will:

- a. Evaluate real-world situations and distinguish between and apply exponential, logarithmic, rational, and discrete function models appropriately.
- b. Analyze, interpret, and communicate results of exponential, logarithmic, rational, and discrete models in a logical manner from four points of view- visual, formula, numerical, and written.

Goals: For each student to be able to apply and retain the information from the course.

Exams: Three 100-point examinations will be given during the Fall quarter. No make-up exams will be given. You may replace the lowest exam with the final exam score if the final exam score is higher.
